Response Time Analysis

EXHIBIT C

Our analysis suggests that relocating Station 4 to either the Golf Course (Site B) or Loma Linda (Site C) would offer limited significant benefits. Performance across all three locations, including the current site, is generally high. While Site C shows the highest performance, the differences are minimal, with marginal improvements of 0.19% and 0.27% for Sites B and C respectively, compared to the current location. Given these findings, our model indicates that any of the three sites would be suitable candidates for the station, with limited additional advantage to relocation.
